Gala Day in Aid of Swimming Pool A Great Success

Many Tags Sold; Aquatic Sports Dance in Evening

Friday of last week was Gala Day so far as the Redcliff Swimming Pool was concerned.

The Committee had planned and carried out a full day of effort with the object of raising funds for the treasury.

Five young girls and one boy sold tags most of the day, from which a nice sum was realized.

In the evening beginning at 6:30 Aquatic Sports were held at the Pool, where there was a good attendance, many from Medicine Hat being present.

Mayor Naugher opened the evening's performance with a speech in which he commended the Committee for their untiring efforts and thanked the citizens for their generous support of the Pool.

Mrs. Jno. Kitchen, who has been particularly active in helping in the work connected with the Park and the Pool was presented with a fine bouquet of flowers as a mark of appreciation from the Committee.

Thelredcliff Citizens Band was in attendance and added much to the enjoyment of the evening.

Mr. Joe Podesta acted as announcer for the Aquatic Sports and Messrs. Roy Jones and Geo. Baker of Medicine Hat, dressed as clowns, provided much amusement for the crowd.

The following is the program and list of prize winners: Diving for pennies—All the children.

SWIMMING—

Girls, 7 and 8, twice across the pool—1st Lorraine Hope and Annie Baker, tied.

Boys, 7 and 8, twice across the pool—1st Ralph Wilby; 2nd John Haultsch.

Boys, 10 and 11, length of pool—1st Ben Houston; 2nd Ernie Goodie; 3rd Ronnie Leppard.

Girls 10 and 11—1st LeVina Fitzhugh; 2nd Elaine Sangster; 3rd Margaret Myers.

Boys 12 and 13—two lengths of the pool—1st Bob O'Brien; 2nd Howard Osgood; 3rd Andrew Madson; 4th Donald Sangster.

Girls 12 and 13, two lengths of the pool—1st Dorcas Fitzhugh; 2nd Tota Caspau.

Boys, 14 and 15, twice length of pool—1st Glen Newman; 2nd Mickey Moore; 3rd Bob O'Brien.

Boys 16 and over, open, three lengths of the pool—1st Jack Fitzpatrick; 2nd Jack Wilby; 3rd Jim Foulston.

Girls, 16 and over, three lengths of the pool—1st Tota Caspau; 2nd Dorcas Fitzhugh.

Wilfred Hubbert and Billy Martin of Redcliff and Cyril Collins, Jim Foulston and Jack Wilby of Medicine Hat gave an exhibition of fancy diving which was very interesting for the spectators.

The judges for the diving contest were G. Huckle, A. R. Balintyne and Jim Podesta Jr. The following were the winners:

Girls 12 years and under—Elaine Sangster.

Boys, 12 years and under—1st Billy Martin; 2nd Carlo Johnson (special prize).

Recreation and Health As in Canada Today

Number 1 of a Series of Articles To Appear in The Review

During the last few years Canada has made tremendous strides in regard to all-around health. Social legislation has advanced in all the many fields of public health and welfare.

"More sun in corpore sano" is no longer a mere phrase—it has taken on a real significance and today's Canadians have a greater chance of living a fuller and richer life than had their forefathers.

Physical Education has now received recognition by both Provincial and Dominion Governments and takes its place along other progressive legislation.

Throughout Canada have taught physical training according to the principles of the Birkbeum Trust. Hundreds of teachers have been trained according to ideals far removed from the conception of physical education that we have today and hundreds of thousands of children have been given a completely new idea on this subject.

"While physical training and elementary drill should be encouraged—special importance is to be attached to the teaching of military drill", such are the principles and objects of the Trust. Is it any wonder that children and adults alike have shied away from this training?

Today's ideals and principles regarding physical training are based on the harmonious development of the "Whole man"—spiritually, mentally and physically fit, symmetrical and graceful body and equally symmetrical and graceful of mind.

A national fitness scheme is all embracing. It has no sex or age limitation. We must first teach our people that sunlight, fresh air, proper food, regular cleanliness, exercise and regular habits are essential to the attainment of physical fitness.

We must also teach our people the proper division between work, recreation and rest; between long intellectual work and proper physical education—gymnastics, games, dancing, athletics. If we are successful in the first mentioned activities and if we can get our people to really take care of themselves, the result should be reflected in the spirit of our people.

Love for mankind, co-operation, unselfishness, will be the outcome of rational training.

Love for Canada, international goodwill and a desire to be good citizens and shoulder responsibilities—that is the goal we aim for—that is fitness.

Boys, 16 and over—1st Jim Foulston; 2nd Wilfred Hubbert.

Plunge for distance—1st Geo Baker; 2nd Wilfred Hubbert.

C. Harr acted as official starter.

Starting at 9 o'clock in Cliff Hall a dance was held. It was well attended and proved very enjoyable to many.

As a result of the day's work the Swimming Pool Committee have added about \$50.00 to the treasury.

J R Mackenzie Is Made Chairman Independent Assoc

Purpose of Organization To Obtain Better Government

At a largely attended meeting in Park Hall last Friday evening, the Independent Association of Medicine Hat was formed with Mr. J. R. Mackenzie of Redcliff elected chairman by acclamation. Other officers elected by acclamation were James Compe, vice-chairman, K. C. McKee, secretary and Mrs. E. Downing, treasurer.

It was decided to have an executive of fifty members, twenty-five of whom were elected the same evening the other twenty-five to be elected later by the officers and those already appointed. Those elected were as follows:—A. P. Burns, R. C. Black, J. A. Bell, W. A. Church, R. Harrison, W. D. G. J. Mitchell, Mrs. J. N. Terrill, Mrs. W. Quinlan, H. C. Becker, Dr. H. C. Dixon, J. Lawrence, W. Zachary, J. Knodel, C. W. Richardson, R. Wareham, L. Monkley, J. Dempster, Mrs. R. Harrison, E. L. Cope, Mrs. M. A. Cory, Mrs. C. W. Richardson, all of Medicine Hat and R. N. Rose, A. J. Learmonth and W. S. Henry of Redcliff.

Mr. Mackenzie explained that organization was the outcome of a popular movement for co-operation between people of all shades of political opinion in an effort to get better government in Alberta.

All those desiring to suggest planks to be included in the platform of the new organization were invited to submit same to the executive. They would all be carefully considered and a platform would be compiled and submitted to a later meeting for the approval of the electors.

Co-operation with and support of the movement was promised by J. Burton of the Liberal Association, W. Cousins representing the Conservatives, and C. W. Richardson of the United League.

On motion of A. J. Bell and W. Cousins, the following resolution was passed unanimously:

"In an effort to secure government that will be progressive, efficient and fair, we, the electors of Medicine Hat (Provincial Constituency) now form the Independent Association of Medicine Hat (Provincial Constituency) and proceed to take all steps necessary to the nomination and election of a candidate."

A further resolution moved by W. A. Church and T. Murray also passed with a dissenting vote. This read:

"The officers and executive of this association shall be Chairman, Vice-chairman, a Secretary and a Treasurer, and an executive of fifty members, twenty-five of whom shall be elected by a meeting and twenty-five of whom shall be elected by the part of the executive already elected at this meeting."

The meeting empowered the officers and executive to administer the affairs of the Association, to appoint committees, to call a convention for the purpose of nominating an independent candidate, and to render all possible assistance to such a candidate.

Legion Bowling Green Attracts Many Players

Greens Now in Good Condition General Invitation Extended

The Legion Bowling Greens are now in splendid condition and several games have already been played on them.

The Legion wishes it to be known that anyone who desires to play is invited to do so. There is no charge at present although it might be necessary at a later date to charge a small fee to participants.

This kind invitation should and no doubt will be accepted by both ladies and gentlemen and many games will be enjoyed during the remainder of the season.

INVITATION EXTENDED

Anyone desiring to play on the Legion Bowling Green is cordially invited to do so by the Committee in charge.

Physical Training Leaders Give Report

Building Necessary in Which to Carry on Physical Training

Synopsis of By-Law No. 224 of Town of Redcliff

To Be Voted Upon by the Proprietary Electors on Monday the 11th Day of September A.D. 1939

A BY-LAW has been introduced by the Council of the Town of Redcliff for the purpose of authorizing the Mayor and Secretary of the said Town an Agreement between the Municipal Corporation of the City of Medicine Hat, therein referred to as the Supply Authority of the First Part and the Town of Redcliff of the Second Part which agreement forms part of the said BY-LAW and may be inspected by any person who desires to vote thereon at the office of the Town Treasurer, or Third Street, Redcliff, Alta.

The said agreement recites that the Canadian Western Power and Fuel Company Limited have not complied with the written notice by the Town to the said Company to construct an Electric Lighting or Power Plant for the supply of electricity to the town inhabitants and the Town may enter into an agreement with any other person, firm or corporation to do so.

The Agreement grants the City of Medicine Hat exclusive rights to supply inhabitants of Redcliff with electricity for a period of ten years at the following rates and provides for a 24 hours continuous daily service in Single Phase Alternating Current at potentials of 2200—220—110 volts.

CLASS "A"—110 volt A.C. 1 phase service First 30 k.w.h. @ 10c per k.w.h. Next 60 k.w.h. @ 5c per k.w.h. Over 90 k.w.h. @ 3c per k.w.h. Minimum charge—\$2 per mo.

CLASS "B"—General purpose power, continuous A.C. 1 phase—220 volt service not to exceed 50 H.P. First 300 k.w.h. @ 4c per k.w.h. Next 700 k.w.h. @ 3c per k.w.h. Over 1000 k.w.h. @ 2c per k.w.h. Minimum charge—\$1 per rated H.P. per month. No account rendered for less than 3 H.P.

CLASS "C"—Industrial Purpose continuous A.C. 3 phase 220 volts service up to 200 Horse Power. First 300 k.w.h. @ 4c per k.w.h. Next 700 k.w.h. @ 3c per k.w.h. Over 1000 k.w.h. @ 2c per k.w.h. Minimum charge—\$1 per rated H.P. for the first 50 H.P. and 75 cents per rated H.P. for all in addition.

Privilege of three phase extension shall be at the discretion of the Supply Authority. Large Industrial power by application and agreement. Supply Authority not bound to erect electrical works until 50 consumers have signified their intention of becoming consumers by completion of the wiring details on their property.

A deposit of \$5.00 to be first made by intending consumers. Accounts to be rendered monthly and if same are outstanding after 30 days from time of rendering the service shall be subject in such case to discontinuance without notice. Supply Authority not to be obliged to construct or erect extensions except for a service of at least five regular applications for electricity service for each 1000 feet of single phase secondary circuit required to be constructed.

Nothing in the agreement to prevent any firm, person or corporation from generating electricity for his, her, their or its own exclusive use. Wiring details subject to inspection and approval of supply authority.

Town not to be liable for delinquent rates. Supply authority to pay taxes on the regular distribution system within the town's jurisdiction based on regular value for assessment purposes and regular mill rate. Any sums due to the town for taxes shall be accepted by the town in the form of electrical energy for street lighting and the like, at three cents per kilowatt hour for metered energy and 12 cents per rated Watt hour per year for all flat energy.

The agreement and all questions regarding rates to be charged for electricity and relating to the distribution thereof shall be subject at all times to the regulation and determination of the Board of Public Utility Commissioners for Alberta.

NOTICE I, Frank Baird of the Town of Redcliff in the Province of Alberta, Returning Officer here by certify.

That the foregoing is a true synopsis of a proposed BY-LAW which has been introduced by the Town of Redcliff and which will be finally passed within four weeks after the assent of the proprietary electors there.

The vote of the said proprietary electors of the Town of Redcliff upon this by-law shall be taken on Monday the 11th day of September A.D. 1939 commencing at the hour of ten o'clock in the forenoon and continuing until the hour of seven o'clock in the afternoon, at the Town Hall, Third Street, Redcliff, Alberta.

Dated at Redcliff, in the Province of Alberta this 17th day of August A.D. 1939.

FRANK BAIRD Returning Officer

Med. Hat-Redcliff Road Surfaced In Near Future

Provincial Government Offers \$10,000 For Road Work

It has been officially announced that the Provincial Government has made an offer of \$10,000 to the City of Medicine Hat to continue the surfacing of the road from the Hat to Redcliff, which offer, the City has accepted.

It appears that the work on the trans-Canada highway within the city limits was so well done by the city engineer and his men that the provincial highway commissioner, after looking over the work must have sent in a very favorable report and the above mentioned offer by the government was the result.

The work on the road will be started in a week or ten days and will give local labor several weeks extra work. The road to be surfaced is a distance of 2.96 miles lying between the top of Redcliff Hill to the Premier Brick Plant corner.

Prison Reform

Initiatives of Prisoners British Prison
Wear Lounge Suits in Evenings
And Sundays

The "old school" tradition in invading English prisons.
From the famous prison at Wormwood Scrubs, in London, it is announced that prisoners there have been given single-breasted blue lounge suits to wear in the evenings and on Sundays, as a change from prison uniforms.

Only star prisoners—first offenders serving sentences of more than six months—are receiving the suits at present but if the experiment proves popular it may be adopted in other prisons. The object is to help to preserve the prisoner's self-respect and give him a rest from the drab gray prison uniform.

Directly after the "star" men have finished in the workshop, they now go to their cells and change into their blue suits before the evening meal.

From Leicester comes a description of the night school which is situated at 20, 21st road, and a bell in the prison there.

Arthur R. Thompson, master at a boys' school who acts as the headmaster, and who gives up two evenings a week to teach prisoners says:

"Lancaster was the first prison in England to have an evening class, and our aim is not to teach men a job, but to give them that background which they would have received at a public school."

"I was asked to become their headmaster and I found a quiet and extraordinary intelligence in the following I teach history, arithmetic, English and chemistry."

"They are fond of history. On other nights different masters take them for other subjects."

The process of selecting pupils is severe, and every would-be scholar has to be interviewed by the prison governor. There is always a long waiting list.

No wardens are present when the headmaster takes the classes in which he tries to cultivate the public school spirit.

Each man has his own desk, a pen and pencil, and a piece of blotting paper. Facing them is a blackboard.

Since Confederation

New Conditions Make Necessary
Certain Changes In Federal
System

Conditions have recently changed since Confederation, and adjustments in the relations between the Dominion and the provinces have been suggested as necessary. "Can we deal with those matters calmly as Canadians sit with reason and equity and with the ideals of a united nation before us? Everything depends on the spirit in which these questions are approached."

There has been a great confusion, as above stated, of the project which was first placed in 1864, at Charlottetown conference, in 1864. Confederation will be proud of it. But there remains still the possibility of the harmonious and successful operation of our federal system. That make our achievement more and more greater. And we cannot but that the vast majority of Canadians have the will and the capacity to accomplish that high purpose.—Winnipeg Free Press.

Will Get His Man

Leader Of R.C.M.P. Band Is Searching
For Wife Player

The Royal Canadian Mounted Police are on the hunt for flute players. Inspector J. T. Brown, director of music and leader of the R.C.M.P. band, is conducting the search and intends to "get his man."

Good flute players, especially ones who will make good R.C.M.P. band members, are scarce, the inspector says, but he hopes to enlist one or two in Toronto.

The band, formed a year ago, has had as its highest honor so far the privilege of being selected to share guard-of-honor duty for the King and Queen when their Majesties visited New York.

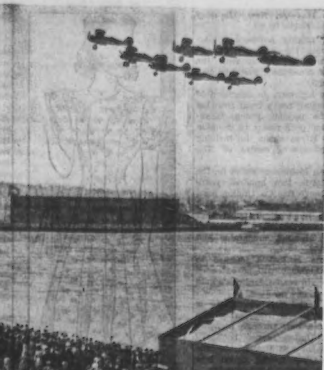

Considered Royal Fish

But Palace Officials Warned Not To
Dead Porpoise

Huckingham Palace authorities declined the offer of a one-ton porpoise which became lost in the River Thames and died. Porpoises, sturgeons and dolphins are "royal fish" under an Act of Parliament in the 14th century reign of Edward II, and so the fish had to be offered to King George VI. After palace officials hastily waived their rights, the porpoise was towed to sea for burial.

A convention of women's clubs adopted the word "housemaker" to replace "housewife."

BEIGIAN FLIERS PERFORM AT L.A.E.

This photograph, taken at the International Aeronautical Exhibition in Brussels, shows Belgian fliers rising off the airport in close formation during a demonstration. Military planes of many nations took part in the exhibition.

Chinese Power Of Endurance

Is Proving Important Factor In
Struggle With Japan

H. H. Kung, Premier of China,
says: The relatively simple pattern of
China's economic life, which is
essentially agricultural and self-sufficient in many respects, is less vulnerable to the unsettling effects of a
major war than is Japan's highly industrialized system.

China's vast hinterland, rich in man-power and natural resources, together with the remarkable power of endurance and recuperation which characterizes the Chinese race, has enabled the Government to erect there a strong base for national resistance and reconstruction and to adopt a policy of playing for time.

Spontaneous world-wide sympathy for China's just cause and growing realization that Japan's policy of belligerence and aggression is as much a real menace to the economic interests and political security of the United States as it is to China's freedom and independence, are important factors which operate, and will, believe, continue to operate in favor of China's financial stability. The recent financial and economic assistance which America, France, Great Britain, Russia and other countries have extended to China presents a striking contrast to the fact that in the world's financial capitals the doors of borrowing are closed to Japan. It is in itself an eloquent testimony of confidence abroad in China's financial future."

Another outstanding feature of China's finances that is of importance to foreign interests is the Government's scrupulous anxiety to live up to its obligations.

More Marriages

More People Marry In South Africa
Than Any Other Part Of World

An eligible bachelor or spinster is more likely to get married in South Africa than in any other part of the world.

Statistics show that of every thousand eligible persons in the Union of South Africa, 22 are likely to be married this year. In the United States the figure would be 21; in Britain, 17; France, 15; Germany, 9; Japan, 15; Denmark, 18; and Australia, 17.

Other figures show that a South African's average expectation of life is nearly 58 years, compared with an Australian's 54, and American's 51, a British 50 and an Egyptian's 31. The Australian is the loneliest, comparing population with the area he lives in; while the South African comes next with an average of seven people to the square mile. In Britain the figure is 467.

One Explanation

Women faint more readily than men, explains the eminent psychologist, Professor Donald Laird, because their blood contains more water and fewer red cells than that of males, and is a barrel of emotion, for instance, it lacks the energy and oxygen of a man's blood.

Chased To Other Side

Other figures show that a South African's average expectation of life is nearly 58 years, compared with an Australian's 54, and American's 51, a British 50 and an Egyptian's 31. The Australian is the loneliest, comparing population with the area he lives in; while the South African comes next with an average of seven people to the square mile. In Britain the figure is 467.

Making Success Of Things

Business And Professional Women
Prove They Can Work

Just what do business and professional women do? Well, here's a cross section of the 1,700 delegates to the convention of the National Federation of Business and Professional Women's Clubs which was held at Kansas City.

Miss Bertha Hudson of Westport, Mo., describes herself as "a farmer who works at it." For the last year, she has been in social service work but, for 20 years she managed the chicken and egg end of a 1,000-acre farm where she lived with her father and two brothers.

"A woman can do those things and make a success," said Miss Hudson. "I have been able to get a new suit every year. I always had a good half-ton truck, which I drove myself."

Miss M. Inella McCoy runs a grocery store with her sister in Twin Falls, Idaho. Miss Nina Kinsella of Washington, D.C., is executive assistant to the director of the federal bureau of prisons. Her job is to check up on county jails.

No Loosing Allowed

Germany Imposes Jail Term For
Slacking Away From Work

Absence from work without legitimate excuse or failure to carry through an assigned task means a jail term in the Reich, labor officials have ruled. Two young men were sentenced to one month in jail for a slacker court for slacking away from their jobs. Another man in Paderborn was sentenced to a year of forced labor for laziness and drinking too much. "To avoid work means sabotage of the building up of the Reich," commented the Paderborn newspaper, *Feldzeitung*.

Land Rehabilitation Act

The Land Rehabilitation Act,
adopted at the last session of the
legislature, has been proclaimed,
according to a notice in the *Manitoba Gazette*. It implements the operations of the Prairie Farm Rehabilitation Act in Manitoba, permitting municipalities to enforce regulations designed to rehabilitate drought-stricken lands.

Artificial Daylight

National Research Council Has De-
veloped New Light For Cakes

Grading

An artificial daylight that is better than the real thing has been developed by the National Research Council's lighting experts. It is better than ordinary daylight for color grading and color grading is a vital factor in the valuation of fur, as it is in paint manufacture, and other industries.

By the new method, it can be done under constant reproductions of weather or time of day. Equally important is the fact those conditions can be reproduced exactly at other places and times.

Down in Prince Edward Island, furs have been graded by north sky light, but even this was recognized as subject to great variations. The department of agriculture asked the research council to work out some more satisfactory system. This has been done by Dr. L. R. Howitt and is ready for commercial use.

The ordinary blue electric bulb gives the general effect of daylight but it does not reproduce it. A bulb alone has the disadvantage of being a "point source" of light which tends to be reflected when an article is examined under a diffused source was required.

A special room was developed with an artificial skylight in place of the ceiling. Ordinary tungsten bulbs were used, with a proper color filter to cut down the red and blue rays of the tungsten. By this filter, the same relationship was maintained between the red and blue rays as in daylight. What a color is not daylight. What a color is not daylight. What a color is not daylight.

The very clarity, precision and truthfulness of Tennyson's poetry were means by which he achieved his magic. "I became in getting nearer the truth of nature, he was getting nearer to the ultimate and mysterious as reality in which nature is rooted."

"That seemed to me most appropriate to Tennyson's poetry. His voice has been silent for half a century. It moved me and everyone from very deep. The audience took part in the poet's study and partly in the room where he died."

The very clarity, precision and truthfulness of Tennyson's poetry were means by which he achieved his magic. "I became in getting nearer the truth of nature, he was getting nearer to the ultimate and mysterious as reality in which nature is rooted."

"I think that what impressed me most was how Tennyson's voice brought out the passion in the lines recited from 'Maud', especially these: My dust would hear her and beat, Had I lain for a century dead."

WORLD HAPPENINGS
BRIEFLY TOLD

Trade facilities in Manitoba during June showed a decrease from nine to five as compared with the corresponding period last year.

Selected members of the Ontario Legislature threw out a Government proposal to link the colony's audit department with Great Britain's colonial audit department.

Fire Chief Alex Munroe blamed a pyromaniac for setting 69 fires in Victoria, B.C., during the past four months. Damage was estimated at \$25,000.

Port Hope has dropped its claim to the title, "Fruitful town in Canada." The local newspaper says the town never was known as the "town where radium is refined."

Mrs. Helen Keller, of New York, famous blind and deaf woman, was named a blood-sister of the Hmong Indian tribe of southern Alberta, at a ceremony held at Banff.

Word was received from Ottawa that annual services for the Hmong Indians are to be decided within a short time. The present weekly mail service to the north is to be transformed into a semi-weekly service.

The notorious French prison ship *Le Martiniere*, which carried thousands of French convicts to the Guiana penal colony since 1923, was sold to the navy ministry, to be used as a floating dock.

Newspapers reported the commonwealth government shortly would record a decision to establish an Australian legation in London, provided the United States sends a minister.

Appointment of Sir Lancelot Oliphant as ambassador to Belgium and minister to Luxembourg, succeeding Sir Robert Curzon, was announced. Sir Lancelot is retiring at the end of this year.

Simpson desert in central Australia has been crossed for the first time by an expedition. Dr. H. H. S. Simpson, a geologist, headed a party including six white men that covered the 400 miles in a month.

On Road To Fame

Edmonton Man Left Banking Job To Study Art

Llewellyn Pettley Jones, who left a banking job in Edmonton to study art, received wide publicity at a recent London exhibition of his work. Mr. Jones has a permanent studio in London and critics say he is on the road to fame. One London newspaper, the *Daily Telegraph*, even compared him with Paul Cezanne, famous French painter who also turned down a career in banking to study art. "His new life students call him the Canadian Cezanne," the paper's article wrote.

A prominent English art house conducted a 17-day exhibition of Mr. Jones' work in the London galleries June 26 to 23. Rt. Hon. R. B. Bennett, former Canadian prime minister, opened the review. Eighty pictures were on display, mostly of French interest. Mr. Jones studied in Paris for three years.

The painter's proud mother, Mrs. A. H. Jones, resides in the 17th avenue home in Edmonton where he was born and spent his childhood. He was a student at Edmonton public and high schools and after graduation went to a branch of the Bank of Nova Scotia. Three years later he quit to open a studio. His paintings in Edmonton exhibitions attracted wide interest and in 1935 he decided to study abroad.

After six months in England the Royal Academy of London chose his painting of Beta Beach, Edmonton, out of 10,000. The painting was shown through the British Isles and France.

The following years brought recognition from the Royal Society of British Artists, the Royal Society of Portrait Painters, the Société Nationale des Beaux-Arts, and other art associations. His best-known pictures are *Limestone*, *Wenatchee*, *Winter in Richmond* and *Wenatchee*. Some of his work hangs in the National gallery in Ottawa.

Not Very Profitable

It doesn't always pay to appeal. There is Dr. F. R. Rutan, medical health officer of Woodstock, Ont., who getting \$1,200 a year was offered \$1,500 but refused, demanding \$1,800, went before a county judge and has been ordered \$1,300.

In the islands of Bermuda, natives forecast the weather by means of a bottle filled with clear shark's liver oil. When the oil turns cloudy, a storm is approaching, according to the natives.

Birds are sensitive to light changes. They awaken at the first break of dawn and nest at dusk.

Canada's Currency

Fifty-Four Million New Bills Issued By Bank of Canada Last Year

Last year about 54,000,000 new bills were issued to the public by the Bank of Canada, and more than 210,000,000 have been issued since the smaller sized bank bills came into use in 1933, according to the Dominion bureau of statistics.

That gives some idea of the number of bills required to satisfy the commercial needs of a country of over 11,000,000 population.

These bills range in value as follows: \$1, \$2, \$5, \$10, \$20, \$50 and \$100. The authorities keep close track of the hands into which the \$1,000 bills fall. It is the highest denomination bill.

As a matter of fact Canada's monetary system has fewer units in it than formerly. A \$4 bill used to give a lot of trouble, for counterfeits were able to cheat the public sometimes by raising a \$1 bill to a \$4, so it was discontinued.

Another device used to have more silver change also. There was a 20-cent piece which created confusion occasionally. Silver dollars, or "cart wheels" as they were called, were used regularly.

A popular bill in years past was the one-cent denomination. It was called "thin plasters" and knew them by that name. They were very handy for hawking and quite frequently even a "thin plaster" will come in a letter for some payment.

SELECTED RECIPES

JELLIED MEAT LOAF

1 tablespoon gelatine
1/2 cup cold water
1 cup stock, well seasoned
1/2 cup minced onion
10 Christie's Premium Sausages
1/2 cup Worcestershire sauce
1/2 cup ketchup
1/2 cup chopped cold meat (veal, lamb, ham, beef or chicken).

Soak gelatine in cold water for 10 minutes. Add onion to stock, bring to boil and pour over soaked gelatine. Stir in crumbled sausages, Worcestershire sauce, ketchup and cold meat. Turn into mold and chill. Remove from mold cut in slices for serving.

Garnish chicken loaf with chilled peas in lettuce cups with potato salad. Beef loaf with sliced potato salad in lettuce cups. Chicken loaf with sliced potato salad in lettuce cups. Chicken loaf with sliced potato salad in lettuce cups.

THOUSAND ISLAND PICKLES

1 cup Jiffy Mayonnaise
2 tablespoons Chili Sauce
2 tablespoons catsup
2 eggs, hard-cooked and cut in small pieces
2 tablespoons chopped gherkins or olives
1/2 cup cream, whipped

Method: Combine all ingredients except cream in a bowl and mix well before serving fold in whipped cream.

A Courageous Woman

Madame Fern Chagnon Protests Against Some Quebec Laws

There is no more progressive-minded woman among the French-Canadian women of Quebec than Madame Fern Chagnon, wife of the speaker of the House of Commons and daughter of the late Sir Rodolphe Forget. Long ago she was brought into prominence when she was elected a director of a chain store corporation. But it is not in business that she is best known. She is an outspoken and courageous advocate of women's rights in the province of Quebec.

Quebec is without the franchise for women in provincial affairs and it is backward in many other respects. Madame Chagnon is concerned. Mrs. Chagnon's voice is constantly being heard in protest. Only recently in speaking at a meeting of the women's club she made some caustic reference to Quebec laws. She cited as an example permitting a boy of 14 and a girl of 12 to marry, but forbidding them to attend motion picture shows until they are 16.

A legislator of 21 has the political status of a man, but she loses it when she marries, Madame Chagnon added.—*Lehrbühne* Herald.

Egg-Shaped Concert Hall

Acoustical Effects in Liverpool's New Building Are Perfect

A concert hall shaped like an egg to provide perfect acoustical effects for music, speech and even sound films, has been opened in Liverpool by the Liverpool Philharmonic Society to replace the old old hall, which burned in 1933. The equipment includes an electric organ, a piano, a gramophone and 2,000 persons, cost over \$200,000, which does not seem excessive. The English know how to do things without being wasteful.

Road To North

Manitoba Has A New Highway North Of 53

Another highway through western Manitoba, one of the properties of the North American tourist with the opening of Manitoba's first highway north of 53.

The new highway, an extension of No. 10 running north from Brandon, will give some idea of the importance of the highway to Dauphin and Swan River, opens the driving and historic centre of the Prairies.

It was an historic occasion for the northern town, two hundred years ago a Hudson Bay trading post when engineers completed the last leg of the hundred-mile road that carved out of a wilderness swamps, lakes and mountains and timber lands.

The road looked forward to when the highway will be extended still further to reach Manitoba's gold mining town of Pelly.

The province government now is understood to be considering the making of a new through highway from Winnipeg to the north, passing northward through Brandon to the Prairies to simplify tourist travel into the recently opened north country.

At Brandon the northward highway would cross the trans-Canada highway, now being hard-surfaced, and make connections with Winnipeg and other western Canada centres complete.

Car Of The Future

Will Be Vastly Different From Type Known And Tested

From the World Automotive Engineering Congress comes prediction that the car of the future will be a "front drive engine in front," not for the motor it causes, but for speed. It will bulge big at the front and taper to a point at the rear. Our cars nowadays are built wrong end first in shape.

The car of to-morrow will be either a "front drive engine in front," or a "rear-drive engine in the rear," Figure 1 or 2.

It will be a buttoned-up affair. Door handles will disappear and give place to buttons for entrance into a command room. The light, movable seats. The roof will be translucent. A button will turn the light, movable seats. The roof will be translucent. A button will turn the light, movable seats.

HOME SERVICE

YOU, TOO, CAN SWIM IN EXPERT STYLE

John Bull tells the best tips in the world and other nations know it. Even at the present time, says the *Brooklyn Recorder* and *Times*, when various British yards are busy on orders for naval account, the shipbuilding industry is able to say that it is working on fully 40 vessels of various types for foreign countries.

They include destroyers, submarines, cargo motorships, motor tankers, colliers, trawlers, patrol boats, destroyers and motor torpedo boats.

Cycle yards are building two motor tankers of 15,000 tons deadweight each for Continental orders, two destroyers for Turkey, and a destroyer for the Soviet government and one each for Greece and Iraq. Elsewhere in Scotland work is proceeding on a tanker of 12,000 tons deadweight for Scandinavian account and a trawler for France.

In England, the northeast coast is the busiest district so far as foreign contracts are concerned, the yards there having nine orders in hand. Seven of these vessels—four warships, two motor tankers and a cargo motorship—are on order for the navy, two being a steam collier for France and a cargo motorship for Greece.

Engaged upon six destroyers for Brazil, two destroyers, four submarines and two motor tankers for the German navy, a cargo motorship for Persia, and a number of fast motor torpedo boats for various foreign governments.

British shipyards have had their difficulties but the recognized quality of their output is now responsible for a marked revival of the industry.

A Strange Hobby

When Queen Elizabeth (not George VI's consort, but the daughter of Henry VIII) died she was certainly well looked, leaving behind her 7,000 pairs of shoes, the collecting of which she had a mania for, says *New Orleans*, in the *New York Times*.

Goring demands a 50 per cent rise in Germany's output of wood. Trees must grow faster from now on or the Führer will be furious.

When the water in a new electric tile kettle becomes too hot the kettle tilts itself backward and shuts off the electricity. 2318

A FERTY YOUNG PRINCESS FROCK

By Anne Adams

The British Government expects to complete during the next few weeks an \$8,000,000 (138,800,000) scheme to provide 300,000 hospital beds for the civilian population in air raids in the event of war.

Details of the scheme were disclosed at London in a White Paper published by Walter Elliot, the health minister. It provides for a large number of base hospitals in the civilian areas and use of existing institutions inside cities as casualty clearing depots.

The Government already has selected 181 hospitals and public institutions in various parts of the country and is spending millions of dollars to prepare and equip them to handle civilian casualties.

In addition, 100 sites have been selected for construction of "hut hospitals" and the first one will be completed at the end of this month.

The scheme has been perfected down to the last detail, including arrangements to turn 1,200 buses into ambulances and to purchase 1,000 ambulances and 225,000 stretchers.

In England and Wales, 2,000 first aid posts have been established and 783 mobile units trained.

Prepared For Casualties

Britain Can Handle 300,000 Air Raid Victims If Necessary

The British Government expects to complete during the next few weeks an \$8,000,000 (138,800,000) scheme to provide 300,000 hospital beds for the civilian population in air raids in the event of war.

Great Pianist Was Kindly

Paderewski Remembered People Who Helped Him To Succeed

The *New York Times* tells this story: In Paderewski's struggling days a certain well known family of Chicago sponsored his career and he became a frequent guest in their home. Years later, when the great Polish pianist had come into world fame, he remembered the hospitality of his Chicago friends.

When told that he had "listened in" to Paderewski, said that he had not seen the concert for the first time is described by her: "He went into the drawing room, opened the French windows upon the terrace and played the entire concert for this friend of his early days—another instance of the chivalry of a musician who has evolved a sympathy of praise more wonderful even than his skill has played."

British Shipyards Busy

Other Nations Know Where Best Ships Are Built

John Bull tells the best tips in the world and other nations know it. Even at the present time, says the *Brooklyn Recorder* and *Times*, when various British yards are busy on orders for naval account, the shipbuilding industry is able to say that it is working on fully 40 vessels of various types for foreign countries.

They include destroyers, submarines, cargo motorships, motor tankers, colliers, trawlers, patrol boats, destroyers and motor torpedo boats.

Cycle yards are building two motor tankers of 15,000 tons deadweight each for Continental orders, two destroyers for Turkey, and a destroyer for the Soviet government and one each for Greece and Iraq. Elsewhere in Scotland work is proceeding on a tanker of 12,000 tons deadweight for Scandinavian account and a trawler for France.

In England, the northeast coast is the busiest district so far as foreign contracts are concerned, the yards there having nine orders in hand. Seven of these vessels—four warships, two motor tankers and a cargo motorship—are on order for the navy, two being a steam collier for France and a cargo motorship for Greece.

Engaged upon six destroyers for Brazil, two destroyers, four submarines and two motor tankers for the German navy, a cargo motorship for Persia, and a number of fast motor torpedo boats for various foreign governments.

British shipyards have had their difficulties but the recognized quality of their output is now responsible for a marked revival of the industry.

Turkeys Go Modern

New Type Bird Shown At The World's Poultry Congress

A turkey that will fit in modern homes and ice-boxes without crowding them is exhibited at the Seventh World's Poultry Congress held in Cleveland, Ohio. The display, part of the U.S. Government exhibit, includes a new type of turkey, a young tom and a young hen. The modernized turkey is in the shape of a young tom, with small turkey legs in the market usually bring a premium of from one to five cents a pound over larger ones.

Contrary To General Idea

Medical Journal Says Ice Water Does Not Harm People

Ice water is not harmful, as many persons believe, the *Journal of the American Medical Association* says. "There is no reliable evidence that ice water (water from 37 to 50 degrees Fahrenheit) causes injury to the alimentary tract," it reported. "Taken in large quantities with food, it probably does not produce, slows down gastric digestion for a few minutes. But this is probably of little significance."

No Brained For Them

The annual sale of buggies in the United States amounts to \$500,000, but in North York, there are only two buggies for sale. The white covered with the dust of the years, are in the back of a hardware store there.

An analyst of the outlook in the mysterious east new Chinese leaders are being with only one hand the handshakes a pushy business.

League of Canada

present TOPICS OF VITAL INTEREST

by DR. J. W. S. McCULLOUGH

TEACH CHILDREN HOW TO SAVE LIVES

A timely article in "Health," official publication of the Health League of Canada, which has been campaigning for a wider knowledge of artificial respiration methods, is contributed by Walter Macdonald, of the Ontario Hydro-Electric Power Commission. In this article he says:

"The Schafer method of artificial respiration is the one known by everyone. It is so simple that it should be familiar to everyone. It is recommended that parent pupils in the schools, both boys and girls, should be taught to practice it. Knowledge of the kind will sooner or later prove to be a life saver. Employees of public utilities practice it regularly at least once a month. It may be successful even when there has been no perceptible pulse, or other signs of life, for several hours. After the patient has been revived it is necessary to transport him to a hospital or to his home or to a hospital so that he may be put to bed. He must not be allowed to sit up, stand or walk. He must be transported in a lying down position. Experience has shown that at a place not far from where he was to give one of his convalescents, he arrived at his home to be surprised to find the patient dead. When told that she had 'listened in' to Paderewski, said that he had not seen the concert for the first time is described by her: "He went into the drawing room, opened the French windows upon the terrace and played the entire concert for this friend of his early days—another instance of the chivalry of a musician who has evolved a sympathy of praise more wonderful even than his skill has played."

To summarize:
1. Do not let the victim from electrical contact, gas or water, as otherwise would be lost.
2. Start artificial respiration by well-trained persons, as promptly as possible.
3. Use warmth. Hot water bottles, etc., should be used.
4. Do not stop artificial respiration until the patient has been revived. There are definite signs of a living mortal.

Transport the patient in a lying position to home or hospital and place him in bed.
As a final word let me repeat that in cases of drowning, artificial respiration by means of the Schafer method is the only method that has been proven to be successful. Diligently and persistently carried out, it will save the lives of many persons who otherwise would be lost. The method should be learned by everyone. Knowledge of it will save many lives.

Editorial Note: Readers desiring to know more about the Schafer method of artificial respiration, or to secure the Schafer manual, should write to the Health League of Canada, 163 Bond St., Toronto, Ont.

Should Co-operate
Premier Bracken of Manitoba Urges Farmers To Work Together

Premier Bracken of Manitoba in an address to 400 farmers at the Dominion Experimental Farm at Charlottetown urged farmers to work together, and that the experimental stations, their "research laboratories," to solve their problems.

"The farmers' meeting, held in conjunction with the Charlottetown Confederation celebration, was the largest gathering of farmers in the Dominion since the white cover with the dust of the years, are in the back of a hardware store there.

Spoke briefly on the work of Western's Institute in Canada. John Murray of Ottawa, Chief Superintendent of Illustration Stations, urged farmers to make more use of them.

W. N. D. Service

CHAPTER I—Continued

The crust offered good footing and with snowshoes on the sled and with what strength remained in their uncertain legs Noel and Alan followed the dog over the river ice to the valley.

Turning in shore at the water hole in the ice they followed a better trail back into the timber.

"Something very strange here," said the puzzled Indian, shaking his hooded head. "Du was no Montagnais came. We were de dog sign."

"No, there are no signs of dogs or no signs of—well, men at that!"

"By gar, white men on de Talking River!"

Staring beside the husky whose throat rumbled as he suspiciously sniffed the air while the hair of his mane and back slowly rose, Alan and Noel gazed in amazement at the substantial log building, backed high with snow, which stood in the centre of the clearing that opened before them.

"White men on the Talking River!" Alan repeated, his curious eyes noting the size of the log cabin with its large mud-plastered chimney, the huge platform cache evidently girded with supplies which were covered by canvas, the two pairs of snowshoes and the log cabin and the snow beside the door, and close by the simple remains of what had evidently been an enormous wood-pile in the autumn.

Dizzy from weakness Alan started for the cabin. Reaching the cabin he struck it with his mittened hand and called out: "Hello! Hello there, inside!"

For answer the door slowly swung in and the two plucked faces in the hoods started into the black muzzle of an automatic pistol. Hunched back the pistol stood a bearded giant of a man whose ice-blue eyes glittered hotly beneath a livid scar that gouged his forehead.

In all the wide north, starving men were not greeted in this fashion. Alan, Cameron's hollow eyes flamed with anger as he met the cold stare that probed his.

"You don't need that gun," he rasped. "We're starved out, our traps are up on the Mad River. We trade at Fort George. A volunteer get into our cache and they destroyed every bit of fish and four we had."

The throat slowly faded from the cold eyes and the gun went back to its holster. "Starved out, eh? You fool!"

"We were on our way to the Sinking Lakes to find the Montagnais."

"Well, you'd have been out of luck if you hadn't struck this place. There are no hunters on the Sinking Lakes this winter."

Alan and Noel exchanged perplexed glances.

"Now, boys," continued the giant, "I've got some caribou stew in the kettle that'll wipe that hungry look off your faces. Come in!"

"You don't need that gun," he rasped. "We're starved out, our traps are up on the Mad River. We trade at Fort George. A volunteer get into our cache and they destroyed every bit of fish and four we had."

"You don't need that gun," he rasped. "We're starved out, our traps are up on the Mad River. We trade at Fort George. A volunteer get into our cache and they destroyed every bit of fish and four we had."

"You don't need that gun," he rasped. "We're starved out, our traps are up on the Mad River. We trade at Fort George. A volunteer get into our cache and they destroyed every bit of fish and four we had."

"You don't need that gun," he rasped. "We're starved out, our traps are up on the Mad River. We trade at Fort George. A volunteer get into our cache and they destroyed every bit of fish and four we had."

into the cups and handed them to Alan and Noel.

"Steady, boys—not all at once!" he warned as the two feverishly drank the nourishing and palatable broth.

"We've been living on wolf the last week—what there was of it," said Alan. "I got two but they were like 'timber wolves' in them."

"No, white Arctic wolves?"

"That explains it—hunting wolf for the caribou, and most of the deer have moved east out of this country."

"That's why the Montagnais did not winter on the Sinking Lakes," nodded Alan.

Seated on a chair made of split spruce slabs, Alan threw curious glances about the interior of the cabin while the big, yellow-haired man offered Noel a plug of smoking tobacco and cut slings for the huge pipe he held in his hand. The sprung log walls were carefully chinked with moss plastered with mud. Two small stoves made of caribou parchment through which the last rays of the sun dimly entered, were added to light the room by a large candle set in a horn stick. On a wall a pair of caribou antlers held three rifles, from their horns three long hunting belts with sheathed skinning knives hung into a corner of the room was a double-decked bunk, mattress with spruce boughs and covered with Hudson's Bay blankets and dressed caribou and bear skins. Near the bunk a ladder of spruce poles reached to a trapdoor in the left over the main room, and at the end of the room, for the chimney was on the side of the building, a closed slab door, hung on rawhide hinges, communicated with a second room.

These details the quick eyes of Alan covered with a glance. The clanking of his stomach was forgotten in his amazement at finding a permanent camp, which no man could build alone, on the headwaters of the big river—on the fragments of the unknown interior of Ungava. Who was this man and where were the others? For what were they here?

As the giant turned to him when he had left Noel's pipe and his own, Alan glanced: "Just one more cup of that stew!"

"No more, now," was the answer. "You boys here? Lie down, you two, and get some rest like the dog there. He's asleep already."

"Oh, how much more drink?" teased Noel.

"No, not a mouthful!" the bearded man lifted a big hand in a gesture of refusal. "It's an hour you'll have more. Then, when you get some strength, well talk. You're weak as rabbits now."

So Alan and Noel stretched upon the lower section of the slab and almost immediately the warmth of the cabin and the food in their stomach brought sleep.

CHAPTER II

As hour later Alan and Noel rose from their sleep, their drawn faces beaming at the thought of food, smacking their cracked lips and eating the nourishing liquid and asked for more.

"No, not yet!" refused their host. "The cold eyes softened. "Tough!" Then Alan suddenly demanded: "Tough?"

"It's out by the sled. Call him in."

Alan opened the door and the husky humped softly inside, signaling the pan offered him and sprawled on the floor with a contented grunt.

"And telling where you got that dog?" asked McCord.

"I got him as a pup from a north coast Eskimo."

"He's a beauty," said the man with the beard, admiring the massive head with its black and white markings, and growl, frame, with white chest and shanks.

"Since we're going to see something of each other before you head for home," went on the giant, "what's your name?"

"Alan Cameron. My father was

factor at Fort George. My partner's name is Noel Lepout."

The big man extended a calloused hand to each of the boys. "My name is John McCord. Welcome to Castle McCord!" he added with a laugh.

Alan's mind was busy with the mystery of how this yellow-haired giant had found his way to the Talking River whose headwaters takes its on the frontier of an unknown country. Who was he? Why did he come? Where were his men and dogs?

The cups and pan were shortly filled again. Then, lighting his pipe, Cameron said: "Worst angle of the lakes I ever saw—the head water country of these big rivers!"

"How did you get here?" The gray eyes of Cameron met the sudden scrutiny in the cold stare of his host.

"That's a fair question," admitted the latter, after an interval, the glitter slowly fading from his ice-blue eyes. "I came from Rupert House with two canoes and an Indian. Some of my dogs were drowned in October on the young ice. My men took rest and went to East Main for more."

"From Rupert House?" Alan and Noel exchanged surly looks.

"Yes, it took all summer. We were lost half the time. But we finally picked up a Montagnais who knew the portages to the Sinking Lakes. So here I am."

Alan's suspicions, aroused by their hostile reception, were fast fading under McCord's seeming frankness. But whom had McCord feared when he opened the door? Whom did he expect to meet here in the solitude of the Talking River country? From the appearance of the cache he had plenty of supplies and men waiting for him.

"You know where you are?" asked Alan. "No, the ice is of an unknown wilderness. No hunter knows what lies beyond the Sinking Lakes. The Montagnais did not cross the divide."

The bearded man threw back his head with a great laugh. "I suppose there are evil spirits there, too," and giant Windigo who eat men alive!"

Into the dark eyes of Noel stole a look of uneasiness. Among his people belief in the supernatural was universal and to them the unknown heart of Ungava laid, for generations, a tabooed land, the home of demons.

(To Be Continued)

Dwarf Stars

Strange Phenomena, as Discussed by New Telescopes

Remarkable discoveries of new telescopes, 18 dwarf stars, which are masses of fire compressed until the flames are thousands of times heavier than steel, were described to a conference on astrophysics.

New facts about these strange objects were reported by Dr. G. P. Kuiper, director of the observatory of the University of Chicago.

The dwarf stars range in size from that of the earth down to the moon. But most of them are from 100,000 to 1,000,000 times heavier than the earth. Their gravitational pull is so immense that a factor from their face are only a few feet high. On the sun, by way of understanding how small these flames are, they are up to 100,000 miles high. Yet the sun is only half as hot on the surface as the average dwarf star.

Romance in The North

Lady From Edinburgh Travels To Baker Lake In Far North To Become Bride

Miss Jean Warren Strath, Scottish lass, arrived at Churchill, on route from Edinburgh, Scotland to a Hudson's Bay Company post at Baker Lake, where she will marry a man 500 miles north of the Hudson's Bay main port on the shores of Hudson's Bay.

When she arrives at the far-north outpost, the Scottish lass, daughter of Mr. and Mrs. Alexander Strath of Edinburgh, will become the bride of Peter Dalrymple, post manager at Baker Lake. Her husband-to-be is the son of Mr. and Mrs. Alexander Dalrymple, Midlothian, Scotland. Miss Strath plans to remain at Baker Lake for two years before coming out for a holiday.

Extremes Of Temperature

Using new radio sound reception stations, the Weather Bureau at Maclean reported one day recently that the temperature was 75 in the morning, 82 in the afternoon, and recorded only 11 miles away. The 11-mile distance was straight up.

Periodically there is an agitation in favor of having all public buildings, houses, and stores, built on a base that beats—why not have all the Mondays holidays?

A method of tenderizing meat by rays is a research contribution of the physics laboratory.

The population of Soviet Russia has more than doubled since 1916, the new census indicates. 1916

Women Aviators

Changing Eating Habits

English People Gradually Dropping Practice Of Large Meat Meals

Many Twice As Numerous In U.S. As They Were Two Or Three Years Ago

Women Aviators—... as young as 16—are nearly twice as numerous in the United States as they were 21 years ago.

The number holding licences has jumped from 444 to 761 since February, 1937. In addition, there are 10 girl flyers in Hawaii, Puerto Rico and Alaska. The women fly big and little ships. There are licensed to pilot gliders.

Most of them fly for fun, records at the Civil Aeronautics Authority show.

Although there are no women airline pilots at present, 70 have flown the 200 mile hour required for a commercial or transport licence. Another 27 hold the 60-hour limited commercial licence which allows them to do charter business.

The women fliers range from groupsmen, who dropped their knitting needles to take hold of the "stick" to debutantes who wedge their flying into fun-filled days.

The oldest woman pilot record is Edith Clark, 61, of Porterville, Cal.

Fight With Sharks

Three Men Had Narrow Escape In Fishing Boat Off Scotland

Three men had narrow escapes when a school of 50 leaping sharks surrounded their boat and one of the sharks hurled the boat out of the water, off Penzance, six miles from Campbelltown, Argyllshire, Scotland. Blinded by water, Hugh Cameron, the owner, clung to the wheel, and brought the boat back to an even keel. Struggling to beat the sharks, the crew, clung to the wheel, and brought the boat back to an even keel.

"We had not got far out when the Maggs (their motor-fishing boat) was surrounded by sharks—40 or 50 of them," Cameron said.

"Suddenly a fin appeared right in front of us, and I saw a shark leaping to the surface underneath the boat. I could have touched it with my hand, I swung the Maggie round, but the propeller was struck by the shark, and we were swung out of the water."

Parliament members are liable to imprisonment in the clock tower at the order of the speaker for persistent absence from the sittings of the House of Commons. Last imprisonment was in 1826.

Prince Edward Island, originator of the Canadian fur farming industry, now ranks fourth among the Canadian provinces in this respect.

Canadian Pacific

**EARLY FALL TRAVEL
BARGAINS TO EAST CANADA****Editorially Speaking**

Why Not Finish The Job?

Early Fall vacationists will
have an opportunity to enjoy a
trip to Eastern Canada at bar-
gain fares over the Canadian
Pacific Railway from September
15 to 25 inclusive, according to
an announcement by Mr. A. R.
Ballantyne, local ticket agent for
the Company.

Tickets will bear a 45 day re-
turn limit similar to the Spring
trip and permit stopover at
statutory Winnipeg and east.

Three classes of tickets will be
offered - Coach, Tourist or
Standard, the latter two being
good in sleeping cars of class
designated, upon payment of
usual berth charge. Canadian
Pacific's year-around train
provides every modern travel con-
venience - air-conditioned coach-
es, tourist and standard sleeping
cars - dining and observation -
with special tray service from
dining car for the convenience
of coach and tourist sleeping car
passengers.

Mr. Ballantyne has full particu-
lars and will be glad to give
interested parties complete in-
formation.

As announced elsewhere in
this issue, the Redcliff - Medi-
cine Hat road is to be hard-sur-
faced by the City of Medicine
Hat under contract with the
Provincial Government at a cost
of \$10,000.

The road is a matter of 2.96
miles between the top of the Red-
cliff Hill and the Premier Brick
Plant corner.

This is good news to Redcliff
as good roads are an asset to any
community and doubtless there
will be much satisfaction expres-
ed in relation thereto. But in
the opinion of the Review the
hard surfacing should not stop
at the very edge of the town but
should be continued at least
through the town to meet the
highway on the other side. It
would appear to be a good time
to do this bit of road work in
Redcliff when the equipment is
already on hand.

The Review feels that if our
local Council would bring this
matter before the proper authori-
ties a proposition to hardface
a few more blocks while the machi-
nery is in operation would be
given consideration.
